

01. Core Values and Beliefs:

- My core values revolve around integrity in coding, continuous learning, and collaboration. I believe in the transformative power of technology and prioritize user experience while valuing clean and efficient code.

02. Goals and Aspirations:

- As a frontend developer, my goals include mastering the latest frameworks, contributing to innovative projects, and potentially mentoring others in the field. I aspire to advance into more senior roles and lead impactful projects.

03. Building Personal Brand:

- To build my personal brand, I'll start by establishing a strong online presence through a portfolio website showcasing my projects and skills. Consistency in work quality, design choices, and communication tone will be key. Networking with peers, participating in tech events, and collaborating on open-source projects will also help amplify my visibility.

04. Personal Branding vs. Self-Promotion:

- Personal branding involves creating an authentic image reflecting my values, skills, and personality. It's about how others perceive me based on my work and interactions. Self-promotion, however, might come across as solely focused on selling myself without building genuine connections or credibility. Personal branding aims for authenticity and trust.

05. What Makes Me Proud:

- I'm proud of learning different web technologies and using them to create my own projects. It feels great to tackle various technologies and bring them together to build something unique. I'm excited about the projects I'll create using these skills—it's a real testament to my learning and growth in web development.
